

Thematic Group: Sheltering and Assistance	
Focus Group: 3.1. Coordination and Operational Logistics	
Scenario: Alert (yellow traffic-light level)	
Area of action	Contributions to the PAIV and the thematic area
Planning and response procedure	- The procedures included in the PAIV are considered coherent with the operational needs of the alert phase - It is recommended to verify the degree of preparation, updating, and implementation of municipal action plans in order to ensure their operability and alignment with the procedures provided for emergency management
Temporary and permanent infrastructure	- Avoid the use of educational centers as temporary accommodation resources, given the impact that this measure may have on the continuity of school activity - Establish agreements with the hotel and tourism sector to provide medium-term accommodation
Reception, assistance, and logistics for evacuated persons	- Carry out registration and record-keeping processes in reception centers, where there are greater capacities for control, supervision, and management of information on evacuated persons - Develop and implement specific technological tools for the registration and record-keeping of affected persons, taking as a reference systems already used by organizations specialized in humanitarian assistance and emergency management
Institutional coordination and management of CECOPAL and CECOPIN	- Define more precisely the functions, responsibilities, and competencies of CECOPIN and municipal CECOPALs. Greater clarification of these functions would facilitate the preparation and updating of municipal action plans - Strengthen the definition of communication and coordination mechanisms between CECOPIN and CECOPAL, establishing permanent and bidirectional information flows

Thematic Group: Sheltering and Assistance	
Focus Group: 3.2. Social, Health and Psychological Care	
Scenario: Alert (yellow traffic-light level)	
Area of action	Contributions to the PAIV and the thematic area
Entities and coordination of social and health assistance	- Expressly incorporate into the plan entities specialized in the care of people with disabilities and other support needs, such as the Tenerife, Isla Solidaria initiative and the participation of reference organizations such as SINPROMI, in order to strengthen comprehensive care for the most vulnerable groups
Social and health care in shelters	- Enable spaces and resources adapted for groups with specific needs, including people with disabilities, trans people, women victims of gender-based violence, and other groups that may require differentiated accommodation, care, or protection conditions
Care for vulnerable groups and dependent persons	- Conceptually differentiate between disability and dependency, incorporating specific care protocols for each situation and recognizing the diversity of existing support needs - Consider different vulnerability profiles, including people with visual, hearing, physical or motor, cognitive, intellectual, or psychosocial disabilities, as well as people with specific dietary needs, anxiety disorders, phobias, or other circumstances that may affect their well-being during evacuation and their stay in shelters - Establish assessment criteria that allow resources and support to be adapted to the different degrees of dependency and levels of autonomy of the affected persons
Social services and community support in shelters	- Ensure the coordinated provision of psychological, health, and social care in shelters - Incorporate specific measures for the reception and management of animals during evacuations, considering differentiated resources according to their type (companion animals, livestock, wildlife under custody, exotic species, or other animals dependent on evacuated persons), in order to facilitate evacuation and reduce situations of risk or refusal to evacuate

Thematic Group: Sheltering and Assistance	
Focus Group: 3.3. Safety and Security	
Scenario: Alert (yellow traffic-light level)	
Area of action	Contributions to the PAIV and the thematic area
Security and protection in shelters	- Clearly define the authority responsible for shelter security, assigning command and coordination functions to the competent security body according to the territorial scope of action - Consider the incorporation of private security services as a complement to public surveillance devices - Develop specific internal security protocols regulating aspects such as access control, coexistence, limitations on the use of certain spaces, and the custody of personal belongings
Access control and registration of people	- establish a tiered registration system that allows a first registration to be generated during the evacuation process and the information to be completed upon arrival at the shelter - design standardized forms for the homogeneous collection of data on evacuated persons - clearly define the organizations responsible for identification and registration processes, establishing their specific functions - implement individual identification systems during transfers, through mechanisms such as wristbands or other solutions that facilitate the traceability of evacuated persons
Operational organization of accesses and control points	- expand the information collected in registration forms to include data relevant to the care and protection of sheltered persons, such as regular medication, specific support needs, residence address, or contact persons - design differentiated and controlled access and exit circuits, limiting entry and exit points to those strictly necessary to facilitate control, security, and occupancy-monitoring tasks
Protection of goods and belongings of evacuated persons	- enable control points for the basic registration of objects and belongings brought into shelters - provide secure spaces for the temporary deposit and custody of valuable objects belonging to sheltered persons - provide differentiated accommodation areas for people accompanied by animals and for those who are not

Thematic Group: Sheltering and Assistance	
Synthesis of the Thematic Group	

Scenario: High-Alert (orange traffic-light level)	
Focus Groups	Contributions
General ideas	General considerations on shelter management: - It is estimated that between 10% and 15% of the evacuated population will require temporary accommodation in reception resources, although this figure could increase depending on the evolution of the emergency and the duration of the evacuation measures. - Two main modalities of relocation of the evacuated population are identified: transfer to areas far from the affected area, prioritizing safety and reducing exposure to uncertain-evolution scenarios of the phenomenon, and transfer to areas close to the area of origin, provided that they are outside the danger zone, in order to facilitate the maintenance of community, family, and work ties. Aspects susceptible to improvement: - Keep population records and databases updated, incorporating relevant information for evacuation planning, the estimation of reception needs, and the identification of groups with specific assistance requirements. - Periodically review estimates of the potentially evacuable population and demand for reception places, in order to adapt resource planning to the demographic reality of the territory.
Logistics	- Arrival at the shelter: registration point, classification (health cases, second homes, sheltered persons, families, vulnerable persons, pets). Sectors and access control - Basic conditions: water, electricity, food, separate bathrooms, screens, annex tents for pets - Minimum resources: stretchers, blankets, hygiene kits, generators, secure storage of belongings - Nearby but independent CRM: daily entry/exit log, food coordination to avoid waste - Logistical coordination: communication among administrations, Ashotel application for managing available hotel places - Volunteers: essential (90% in logistics). Prior training, no spontaneous volunteers. Need for a clear organizational chart (e.g., Red Cross as command)
Social and psychological care	- Reception and registration: personal data, diagnoses, allergies, primary and secondary transport (Red Cross, SUC). - Differentiated spaces: by gender, breastfeeding, PRM, adapted bathrooms; possible modification of structures. - Basic needs: hygiene, toiletries, leisure and free-time activities as emotional support. - Psychological support: emergency observation, not therapy. Importance of making sheltered persons feel useful. - Medication and diets: review of treatments, electronic prescriptions, care for diabetics, allergic persons, etc. - Vulnerable groups: women victims of gender-based violence, homeless people, addictions, chronic/mental illnesses... - Coordination: volunteer call center, adaptation to circumstances
Security and protection	- Controlled access: single entry point, complete registration, valuables and prohibited objects - Custody area: designated responsible person and registration sheet - Internal security: private surveillance, coexistence schedules - Violent conduct: relocation and separation of conflictive persons - External environment: coordination with logistics for traffic closures/alternative routes - Unified command: representative of each corps in the central control
